NEW MEXICO DEPARTMENT OF AGRICULTURE

OFFICE OF THE DIRECTOR/SECRETARY
Box 3189/Las Cruces, New Mexico 88003
Telephone (505) 646-3007

TO THOSE INTERESTED IN NEW MEXICO'S AGRICULTURE:

It is a pleasure to again be a part of the publishing of New Mexico Agricultural Statistics. This publication has long been recognized for its statement on the agricultural industry through its listing of livestock and crop data provided by producers. This information is compiled for use by many statisticians and lay persons who study the health and needs of the agriculture sector, least of which is the producer himself who must have accurate data for planning purposes.

Readers of New Mexico Agricultural Statistics will find that the ag industry in the Land of Enchantment is diversified and many faceted. Basically, this is a healthy industry peopled by those who have faith in the land and belief in their work on it. It is also an industry with a strong academic and research component coupled with service aspects that guide and desire the continued success of New Mexico agriculture. Tough times have forged a commitment by all of us to sustain and strengthen New Mexico agriculture. Therefore, publishing data is part of the guide to the future which we all need to accomplish this goal.

Sincerely,

W.P. Stephens

William P. Stephens
Director/Secretary

STATISTICAL REPORTING SERVICE • NEW MEXICO DEPARTMENT OF AGRICULTURE

ACKNOWLEDGEMENT

The New Mexico Crop and Livestock Reporting Service, U.S.D.A. in cooperation with the New Mexico Department of Agriculture is pleased to present the 1984 edition of New Mexico Agricultural Statistics. This is the twenty-fourth annual summary in the series which dates back to 1962.

New Mexico Agricultural Statistics is a comprehensive report of agricultural statistics for New Mexico including estimates by counties for major crops, livestock and cash receipts. It also includes information about crop production, livestock numbers, farm income, agricultural prices, grain stocks and weather.

A special "Thanks" is extended to the many farmers, ranchers, livestock producers and agri-business people who provided us with the facts about their operations. The data presented in this bulletin are developed primarily from sample surveys conducted throughout the year. The accuracy of the estimates developed from these surveys is closely related to the voluntary responses by farmers and livestock producers to these surveys. Without the excellent cooperation received from New Mexico's agricultural producers the estimates provided in this bulletin and other statistical reports throughout the year would not be possible. We also wish to express our appreciation to those people who attended their respective annual county meetings and provided us with vital data for the county estimates program.

In closing, I want to thank the staff of the New Mexico Crop and Livestock Reporting Service for their dedication in preparing this bulletin. Also, thanks to the New Mexico Department of Agriculture for publishing the bulletin and assisting with its preparation.

Fertilizer

1984 Inshipments

Fertilizer shipped into New Mexico in 1984 increased 23,622.9 tons, or 22 percent, over 1983. Nitrogen materials shipped into the State increased 28 percent from last year, phosphate materials increased 7 percent, and potash materials increased 13 percent. Animal manure tonnage in 1984 increased 283 percent over tonnage in 1983. Tonnages of all classifications except anhydrous ammonia, ammonium nitrate, nitrogen solutions, sulphate of potash, and primarily K_2O mixtures showed declining levels from the first quarter to the fourth quarter.

PRICES AND INCOME

ASSETS and DEBTS - Farm and ranch assets in New Mexico totaled $11,276.7 million in 1984, 2 percent above assets in 1983. Although the 1984 level represents a turnaround from the 1983 decline, it is still $368.8 million below assets in 1982. Real estate accounted for 85 percent of all assets in 1984. New Mexico farm and ranch debt for 1984 totaled 1,409.7 million, 1 percent below debt in 1983, but 6 percent greater than debt in 1982. Real estate accounted for 57 percent of all debt in 1984, compared with 56 percent in 1983.

CASH RECEIPTS - The 1984 cash receipts from farm marketings in New Mexico totaled $999.7 million, up 3 percent from cash receipts in 1983. Livestock and livestock products accounted for 66 percent of the total and were valued at $656.5 million. Crops, valued at $343.2 million, represented 34 percent of cash receipts. Cattle and calves continued to dominate all other commodities, accounting for 46 percent of all cash receipts. Wholesale milk was second with 13 percent, while hay remained third with 9 percent of the total. Wheat, cotton lint, and chile ranked fourth through sixth, representing 4, 3 and 3 percent, respectively. Sales from these six commodities make up 78 percent of all cash receipts in New Mexico from farm and ranch marketings.

FARM INCOME CONCEPTS - Cash receipts from farm marketings represent gross income from the sales of crops, livestock and poultry during the calendar year. The value of home consumption of farm products, inter-farm sales of livestock, and crops fed on farms where grown are not included in cash receipts. Production expenses such as feed, fuel, and fertilizer, and marketing costs are not subtracted from gross cash receipts. County estimates of cash receipts reflect farm productivity of the county to which the income is assigned. For example, income from crops is credited to the producing county even though the crops may be stored, processed, and marketed in another county. Cash receipts from marketings of crops is the final product of several estimates: acreage, yield, percentage of total production sold, average price, and changes in inventories. Marketings of livestock and poultry include the sales value of an animal only once, usually at the time when the animal is sold for slaughter or at final disposition.

Gross farm income includes four principal components: cash receipts from farm marketings, government payments, other farm income, and non-money income. Cash receipts represent gross receipts from commercial market sales as well as loans made or guaranteed by the CCC and other purchases under price support programs. Government payments to farmers are those payments made directly to farm producers in connection with farm programs. Other farm income is cash income from such sources as recreation, machine hire, and custom work. Non-money income includes the rental value of housing provided by farm dwellings and the value of farm products consumed directly in farm households.

Farm production expenses include current farm operating expenses for such items as wages paid to hired farm workers, outlays for repairs of farm equipment and operation of the farm, as well as purchases of oil, feed, and livestock. Overhead-type costs include charges for depreciation and other capital consumption, taxes on farm property, and interest.

Net change in farm inventories is the estimated physical change in livestock and crops owned by farmers, valued at average prices prevailing during the year.

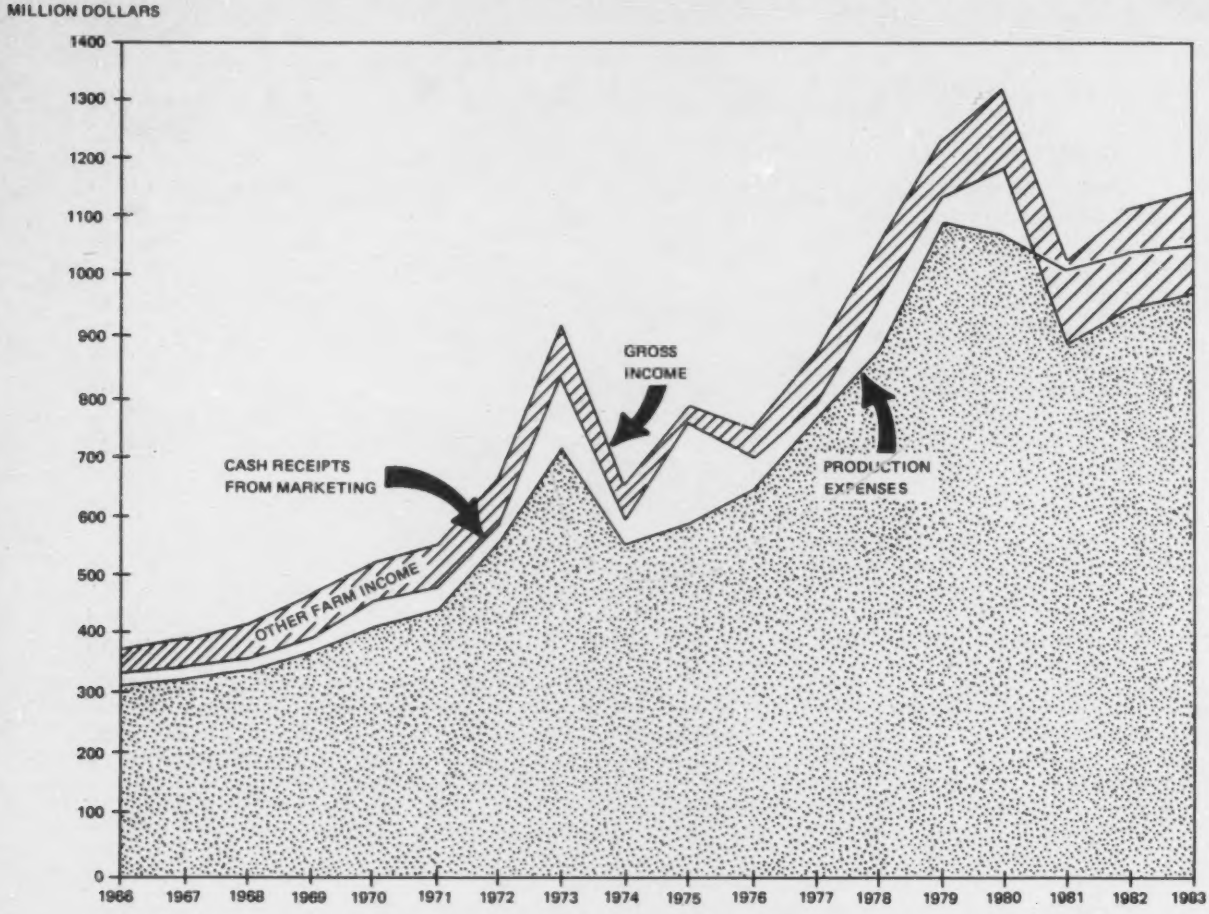
New Mexico Farm and Ranch Income and Expenses, 1966-1983



INCOME - Gross income on New Mexico farms and ranches at $1.14 billion, increased nearly 3 percent in 1983 but remained 13 percent below the 1980 record level of $1.31 billion. Cash receipts from farm marketings at $966.1 million were up 2 percent, government payments increased sharply from $32 million in 1982 to $57 million in 1983, non-money income dropped 6 percent and other farm income slipped 16 percent from the previous year. Cash receipts represented 84 percent of gross farm income in 1983. Realized net farm income, the difference between gross income and production expenses, at $83.5 million, was up $22.5 million from 1982 and $69.1 million above 1981. Total net farm income, which is income after adjustment for inventory changes, at $57.2 million, is up $19.6 million from a year earlier.

PRODUCTION EXPENSES - Farms and ranches in the State had $1.06 billion in expenses for producing their crops and livestock in 1983, an increase of $10.9 million over 1982. This was the third consecutive year that production expenses exceeded cash receipts from marketings

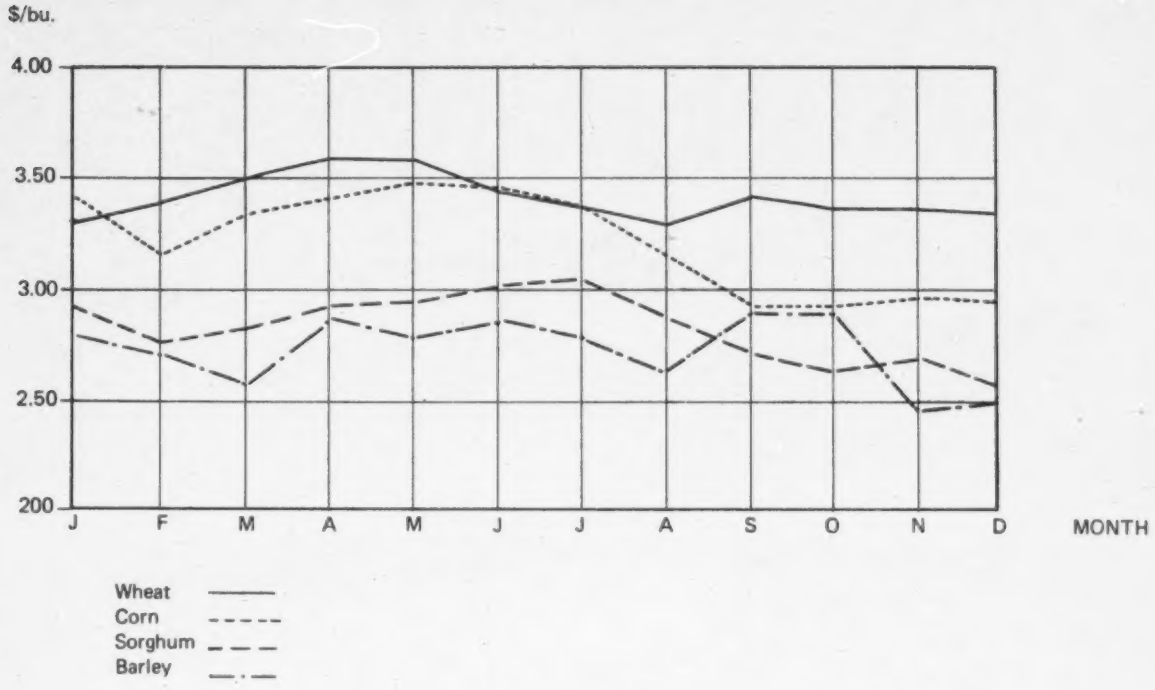
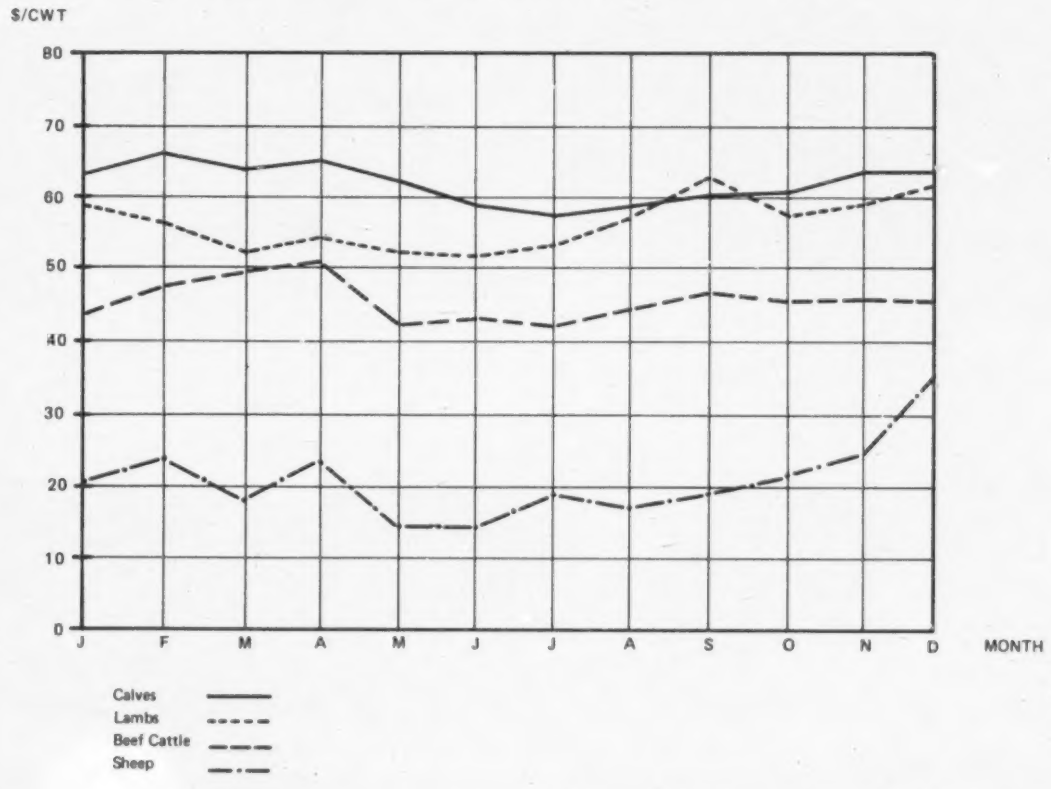
Grain Prices Received New Mexico, 1984



Livestock Prices Received, New Mexico, 1984



LIVESTOCK

The New Mexico livestock industry approached 1984 with mixed expectations. The drought of 1983 was showing no sign of ending and prices for most classes of livestock continued their downward slide. The prolonged drought forced a reduction of both cattle and sheep numbers and inventories were at their lowest point in several years.

As spring arrived moisture was still very short on most of the State's rangeland. Supplemental feeding and hauling of stock water lingered through late spring and early summer making matters even worse for producers.

Finally summer rains brought some relief to the State's drought stricken ranges as moisture was received across most of the State. However, prior to the desperately needed rains ranchers were forced to continue liquidating cattle and sheep herds while prices were at their lowest level of the year.

By year's end, the downward trend in cattle inventory numbers had begun to turn around, mostly on the strength of increased numbers of calves under 500 pounds, steers and heifers on feed in commercial lots and milk cows and milk cow replacement heifers. The drought forced decline in beef cow numbers was still evident as producers ended the year with only a one percent increase in total cattle numbers. The 1984 calf crop declined in conjunction with the beef cow herd and was at its lowest level in twenty-five years.

New Mexico's sheep industry ended 1984 with 9 percent fewer sheep and lambs continuing a 4 year downward trend. As with cattle, lower sheep numbers can be attributed to the drought caused herd reductions and poor prices.

The swine industry in New Mexico rebounded from 1983 as inventory numbers inched upward. However, inventory numbers were still well below 1981 and earlier levels.

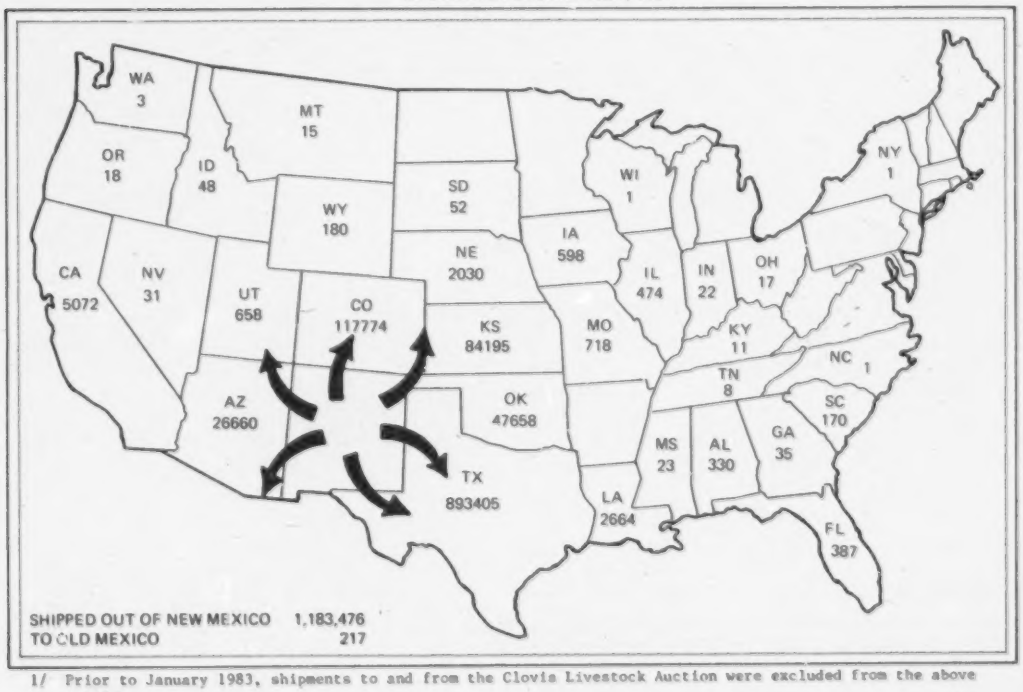
A 2 percent drop in the average number of layers in New Mexico's flocks resulted in a 2 percent decline in the number of eggs produced in 1984.

Cattle Number Shipped into New Mexico

BY STATE OF ORIGIN, 1984[1]

Cattle Number Shipped Out of New Mexico

BY STATE OF DESTINATION, 1984[1]



1/ Prior to January 1983, shipments to and from the Clovis Livestock Auction were excluded from the above totals.

1985	**1410**	**350.00**	**493500**

1/ As of January 1.

New Mexico cattle producers had an estimated 1.39 million head of cattle and calves in the State on January 1, 1984. Inshipments during the year were up 20 percent from the previous year totaling 770,000 head. The shipment of cattle and calves out of New Mexico totaled 1.18 million head, down 5 percent from those shipped out in 1983. The 1985 beginning inventory was estimated at 1.41 million head, 1 percent above the year before. In reviewing the year end inventory by classes of cattle, increases occurred in steers over 500 pounds, other heifers over 500 pounds, milk cow replacement heifers, milk cows and calves weighing under 500 pounds. Partially offsetting these increases was the decline in the beef cow herd and beef cow replacement heifers. The increase in steers and other heifers was the result in the increase of cattle on feed which was estimated at 178,000 head, up 22 percent from the year before.

1/ As of January 1.

The summer of 1984 saw the breaking of the severe drought of 1983 which had resulted in herd reductions and some liquidation in the major producing areas. Improved feed conditions during the summer with adequate winter feed carryover enabled producers to increase herds by holding more young ewe and ram lambs. Inventory of all sheep on January 1, 1985 totaled 538,000 head, 9 percent below the previous year's inventory. Sheep and lambs on feed, at 52,000 head, dropped 19 percent from the January 1, 1984 number. Stock sheep, at 486,000 head, were down 39,000 head. The 1984 lamb crop is estimated at 340,000 head, 10,000 fewer than were saved in 1983 but the lambs saved per 100 ewes 1 year old and over was 78 compared with 77 in 1983.

FIELD CROPS

The 1984 crop year in New Mexico was generally favorable as new yield and production records were established for several crops. Yield records were equaled or surpassed for barley, corn cut for grain, corn cut for silage, and potatoes. Production records were set for alfalfa hay, other hay, potatoes and peanuts. A review of weather patterns during the year illustrates production uncertainties by growers. January through April precipitation was running well behind normal at most locations. This deficit was of great concern to dryland wheat growers. However, irrigated regions depending on surface water could look forward to plentiful water supplies as reservoir storage was nearly two times the average on April first. Finally, in mid-May, rains fell over the eastern grain producing counties to salvage an otherwise poor dryland wheat crop. In fact, rains continued through the summer months in most areas of the State to surpass normal amounts received. This moisture was welcomed by dryland farmers, as well as most irrigated grain producers. Alfalfa growers did not benefit from late summer rains as many counties suffered damage to or loss of 1-2 cuttings. Fortunately, alfalfa prices remained strong through year's end. Corn and grain sorghum harvests were well above average, as were peanut and potato production. Cotton producers did not realize early forecasts of near record yields. Due to the surplus moisture conditions and cooler than normal fall temperatures, bolls were not able to develop to their potential. Some damage occurred on the east side to cotton fields from herbicide applications on wheat. By October 1, most of the 1985 wheat crop had been planted. The crop got an outstanding start as October rains were 3-4 times above normal in the major growing areas. Most crop producers were enthusiastic about the potential for 1985 as the 1984 crop year ended.

1984	**730**	**460**	**26.0**	**11960**	**3.35**	**40066**

New Mexico wheat production fell 12 percent in 1984 to 11,960,000 bushels. Planted and harvested acreage levels were down from the previous year 3 percent and 2 percent, respectively. The average yield per harvested acre dipped 3.0 bushels from 1983 to 26.0 bushels per acre in 1984. Irrigated yields in 1984 were near average for most localities. However, dryland fields were severly hampered by drought conditions in the major producing counties. Finally, much needed rainfall fell in May, which allowed many dryland fields to produce a little grain before harvest. Unfortunately the moisture was too late to revive already stressed plants, particularly in Roosevelt county. The 1984 crop year was not a favorable time for wheat prices, either. The average price received of $3.35 per bushel dropped $.13 from 1983, generating a value of $40.1 million. This total fell short of the record 1983 value by 16 percent.

FRUITS, NUTS AND VEGETABLES

Apples

New Mexico apple orchards were severely affected by below freezing temperatures at critical stages of development in 1984. However, production for the year increased two million pounds over the previous year. Apple growers produced 8,000,000 pounds of the fruit in 1984, up 33 percent from the previous year. The average yield per bearing tree was 61.5 pounds, compared with 55 pounds per tree in 1983. The average price received for 1984 harvested apples was $.175 per pound, or $7.18 per bushel. This compares with $6.04 per bushel received for the 1983 apple crop. Value of the 1984 crop rose 62 percent to $1,400,000.

1984	**24000**	**83.0**	**19920**

The 1984 New Mexico pecan crop is estimated at 24 million pounds. This level represents a 5 million pound, or 17 percent drop from last year's record production of 29 million pounds. The 1984 pecan crop is the first drop in production since 1979.

In conjunction with the lower production level, prices received by New Mexico pecan growers were 10 cents, or 14 percent greater than those received for the 1983 crop. The value of the 1984 pecan crop was 19.92 million dollars, 6 percent lower than the 1983 value.

Lettuce

Photo by Lana Dickson

Lettuce, a cool season crop, has two distinct growing seasons in New Mexico; spring and fall. Spring lettuce production for 1984 is estimated at 266 thousand hundredweight, 63 percent below last year's level. Fall production is estimated at 308 thousand hundredweight, 50 percent below fall production in 1983. The average spring price per hundredweight was 6.40 dollars while the average fall price was 12.00 dollars. The combined spring and fall value was 5.4 million dollars. In 1984, spring and fall New Mexico planted acreage accounted for 3 percent of all lettuce planted in the United States.

Onions

Onion production in 1984 is estimated at 1,365 thousand hundredweight, up 9 percent from last year's production of 1,248 thousand hundredweight. The total value of production is estimated at 16.1 million dollars, an increase of 45 percent over 1983's level. The major varieties commercially grown in New Mexico include Grano, Granex, Sweet Spanish, and Mid-Summer Hybrids. Onions grown in New Mexico are primarily shipped for fresh market. Harvest usually begins in late May and continues through September. In 1984, New Mexico planted acreage accounted for 35 percent of all non-storage summer planted acreage in the United States.

Grapes

New Mexico has experienced an accelerated growth of the grape industry in the past few years. Grape acreage in 1984 is estimated at 4,350 acres, 200 percent greater than in 1983, and 706 percent greater than in 1982.

The number of vineyards in New Mexico is estimated at 70, with over 80 percent of the total acreage in Grant, Luna, and Sierra counties. In 1984, the total number of vines is estimated at 2,827,500.

Grape production has not grown at the same rate as grape acreage because of the time lag between planting and fruit production. Production in 1984 is estimated at 375 tons, 97 percent greater than in 1983. Approximately 345 tons, or 92 percent, were used in commercial wine processing. The remaining 30 tons were either sold as fresh market table grapes or raisins or used on the farms where produced.

PUBLICATIONS ISSUED BY THE NEW MEXICO CROP AND LIVESTOCK REPORTING SERVICE

NEW MEXICO AGRI-INFO

A 2-4 page report issued twice monthly.
Major topics and when information is usually available are:

---Current Crop Prospects - Monthly
---Agricultural Prices - Monthly
---Cattle Inventory - Semi-Annually
---Grain Stocks - Quarterly
---Cattle on Feed - Quarterly
---Livestock Shipments - Quarterly
---Milk Production and Cow Numbers - Quarterly
---Egg Production - Quarterly
---Vegetables, Fruits, and Nuts - Seasonal
---Range and Pasture Conditions - Monthly April to December
---Wool Production - April
---Hogs and Pigs - Quarterly
---Livestock Slaughter - Monthly
---Hay Stocks - Semi-Annually

WEEKLY CROP WEATHER

A 2 page report issued each Monday.

---Temperature and Precipitation Selected Locations
---State Weather Summary
---Planting, Harvesting, and Crop Development Progress
---Range and Livestock Conditions

CROP ACREAGES AND PRODUCTION

A 2-4 page summary issued after each of the four major crop surveys (February Intentions, June Acreage, Wheat Seedings, Annual Summary).

LIVESTOCK INVENTORY AND PRODUCTION

A 2 page summary issued three times a year as an annual summary for cattle and calves, sheep and lambs, and dairy.

CHILE SUMMARY

A 2 page annual summary of the New Mexico chile crop issued in March.
